Please amend the application as follows:

Amendments to the Specification:

Please amend the specification as follows:

Please replace paragraph number [008], with the following rewritten paragraph:

[008] The high viscosity of the embolizing material poses a problem. Forcing a high ~~by~~ viscous material through a small diameter of a long microcatheter requires a high injection pressure, at times as much as 300 psi and even up to 700-1000 psi. Such a pressure may exceed the burst pressure of nearly all conventional microcatheters.
